

Team Name: Inclusive.Si · Product: **GamEdu AI**

Team Size: 1 (Founder: Dr. Syson Jose S., Founder & CEO, MotionPlus Physio Pvt. Ltd.)

Problem Statement: Everyone blames this generation of kids, but the system teaching them never evolved. Children learn by playing and doing, yet classrooms still teach by rote, often in a second language, with no learning games for tomorrow's lesson, little that works offline, and few tools for children with special needs. GamEdu AI turns any lesson into a game and any village problem into a project, in the child's own language, even offline.

Problem Statement

The challenge or problem identified by the team.

23.4%

of rural Class 3 children can read a Class 2 text (ASER 2024)

30.7%

of rural Class 5 children can do division (ASER 2024)

1 lakh+

schools run with a single teacher (UDISE+ 2024–25)

No game for tomorrow's lesson

A good learning game takes a studio months to build, one topic at a time, so teachers have none.

English-first, online-first

Quality content leaves out regional-language learners and the schools without internet.

Children left out

Children with special needs face more distraction and fewer tools that fit them.

> In the AI age students are still trained to memorise answers, not to apply deep, practical knowledge and get efficient work out of technology. The system must evolve.

Proposed Solution

The idea and how it addresses the identified problem.

GamEdu AI is a game-based learning platform: every topic becomes a game, every win builds a skill, and skills unlock rewards across subjects.

1 · Lesson-to-Game

A teacher photographs a textbook page. Gemini turns it into a playable game in a proven template, Nano Banana draws the art; it is fact-checked and teacher-approved.

2 · Junior Scientist mentor

A child explains a real village problem by voice in Kannada, Hindi, Tamil, Telugu or Malayalam. The mentor asks instead of telling, then scores the idea out of 100 with reasons.

3 · Offline and inclusive

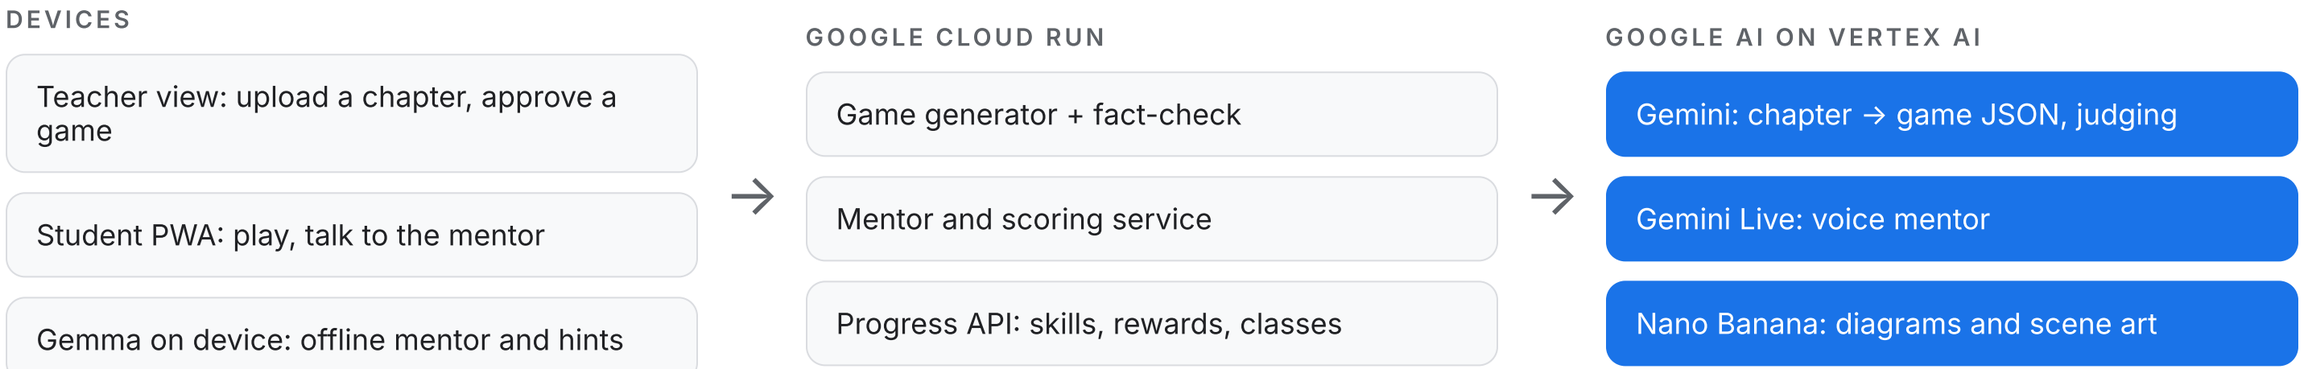

Gemma runs on a low-cost phone with no internet. A calm, distraction-free mode makes learning easier for children with special needs.

Already live: 4 games across 3 worlds (Anatomy Run, Root Raid, Liftoff Lab, Village Lab) · 42 playable levels · josesyson-physio.github.io/GamEdu

> Not against teachers or teaching: it removes the effort of preparing, so every teacher can teach at a top-tier level.

Solution Architecture

Architecture of the proposed solution

Data: Firestore + Firebase Auth (progress, classes, offline sync) · Cloud Storage (chapters, art) · BigQuery (impact analytics) · Mumbai and Delhi regions

Scale: Cloud Run scales to zero between classes; each game is generated once, cached and reused by every class, so AI cost per student falls as the library grows.
Safeguards: teacher approval, fact-check pass, no stored voice, no ads.

Google AI Tools

Google AI Studio, Google Antigravity and Google Agent Skills (used or planned to be used).

Google AI Studio

Designing and testing prompts for the chapter-to-game schema, the fact-check pass, the 100-point scoring rubric and the multilingual mentor.

Google Antigravity

Agent-assisted building of the three Cloud Run services, the teacher view and the student PWA during the buildathon, on our tested game templates.

Google Agent Skills

Planned: packaged skills for the mentor agent (ask-don't-tell coaching, rubric scoring, game generation) so each step is reusable and testable.

Vertex AI

Production access to Gemini, Gemini Live and Nano Banana.

Cloud Run · Firestore · Firebase Auth

Serverless services and offline-synced data for remote schools.

Cloud Storage · BigQuery

Chapters and generated art; learning analytics and impact reports.

Google AI Models

Google AI model(s) used or planned for the proposed solution.

Model	How GamEdu AI uses it
Gemini API	Turns a chapter photo into structured game data; fact-checks it against the source; scores each child's project on a rubric with reasons; adapts hints and difficulty
Gemini Live	Real-time voice mentor in Kannada, Hindi, Tamil, Telugu and Malayalam, for children who can't read well yet
Gemma	On-device mentor and hints on low-cost Android phones with no internet; progress syncs later
Nano Banana	Labelled diagrams, exploded views, characters and scene art for every new game
Lyria	Calm, adaptive music for each game world, with a quiet setting for the distraction-free mode
